DETAILED ACTION

Claim Objections

1. Claims 8, 18 are objected to because of the following informalities:

Claim 8, wording regarding structure of echo canceller should be clarified so that four sub-canceller clearly defines what it being claimed.

Claim 18, line 12 reads dat.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over
 Gonikberg et al (US Patent 5,864,545).

With regard to claim 1, Gonikberg discloses a modem compromising a phase shifter (see figure 7, 641 and column 8, lines 14 – 24 where Farrow is a known structure of a FIR filter) between 1st device and hybrid circuit (see figure 7, 630 & 695, and column 1, lines 44 – 51 where hybrid circuits are inherent in 2 wire circuits); an adaptive equalizer positioned between hybrid circuit and 1st device to minimize intersymbol interference in receive signal (see figure 7, 300a, and column 1, lines 24 – 37 where this is interpreted as describing intersymbol interference); a primary echo canceller coupled between 1st device and equalizer to remove a 1st portion of an echo in the receive signal (see figure 7, 684); a post equalizer echo canceller coupled between 1st device and hybrid circuit having an input to receive

transmit signal and an output coupled between equalizer and 1st device, post equalizer echo canceller adapted to remove a 2nd portion of echo in receive signal (see figure 7, 681 and 310a where this is interpreted as equivalent functionality), post equalizer echo canceller having an adaptive input (see figure 7, 301a and column 9, lines 53 - 65); and a slicer positioned between output of post equalizer echo canceller and 1st device, slicer having an output for producing a symbol value which is a representation of current symbol value being supplied at input of receiver by the receive signal (see figure 7, 772, 660 and column 11, lines 9 – 32 where step 4 is interpreted as having a slicing function), the difference between the input and output of slicer being supplied to adaptive inputs of equalizer and echo canceller (see figure 7, 771 and column 10, lines 58 – 64). Gonikberg discloses the invention except for the positioning of the echo canceller between the phase shifter and the hybrid circuit. It would have been an obvious matter of design choice to move the position of the echo canceller from before phase shifter to after the phase shifter since applicant has not disclosed that echo canceller location solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with the echo canceller in either location.

Allowable Subject Matter

- 3. Claims 2 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. The following is a statement of reasons for the indication of allowable subject matter:

Claims 9 – 15 appear to be allowable based on structure disclosed. Gonikberg discloses a 1st and 2nd algebraic combining unit but is silent on the 3rd algebraic unit

connected with the slicer. Bannerjea has the requisite structural elements but is silent on the details of his transmit filter and shows a different placement of the echo canceller.

Claim 16 appears to be allowable based on the specifics of the claimed interconnection structure. Bannerjea contains many of the elements of the claim but lacks details on the specific implementation.

Claims 17 – 19 appear to be allowable based on structure and operation disclosed.

Gonikberg is silent with respect to IIR filter element and adjustment of sampling frequency.

Bannerjea has the requisite structural elements but is silent on the details of his transmit filter and shows a different placement of the echo canceller.

Other Cited Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Golden (US Patent 5,163,044) discloses many of the structural elements of applicant's invention. Fertner (US Patent 5,793,801) discloses adjustment of sampling frequency of portions of circuitry. Koizumi (US Patent 5,841,809) discloses many of the structural elements of applicant's invention. Cheng (US Patent 5,577,027) discloses many of the structural elements of applicant's invention. Yip (US Patent 5,790,658) discloses many of the structural elements of applicant's invention. Bannerjea (US Patent 6,240,128) discloses the structure of applicant's claimed invention but is silent on some details of the invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Meek whose telephone number is (571)272-3013. The examiner can normally be reached on 8:00 - 4:30.

Application/Control Number: 10/016,438 Page 5

Art Unit: 2637

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on (571)272-2988. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
